

Credits Breakdown

How DJs earn and spend credits today, taken from the live database rules and the app (4 October 2026). Use this to agree any changes with the team.

The basics. Credits are earned only. They can't be bought, and there are no payments or in-app purchases. Today they can be spent on exactly one thing: boosting an application. Credits also rank DJs on the credits leaderboard (admins are excluded).

How DJs earn credits

ACTIVITY	CREDITS	WHO GETS THEM AND WHEN
Application approved for an opportunity	+50	The DJ, as soon as a brand or admin approves their application. Recorded as "gig completed", but it happens at approval, before the gig is played.
Booking request accepted	+50	The DJ, when a brand's direct booking request is accepted.
Referral: a new DJ signs up with your invite code	+25	The DJ who shared the code, straight away at sign-up. The new DJ gets nothing, and the referrer is paid whether or not the new DJ is ever approved.
Someone likes your mix	+10	The mix owner, per like from another DJ. Unliking takes the 10 back (balance never goes below 0). Liking your own mix earns nothing.
Opportunity you posted leads to a completed gig	+15	The DJ who submitted the opportunity in the app, when another DJ completes a gig from it. Not paid for brand or Studio listings, or for your own gig.
Achievements	10–500	One-off rewards, checked automatically whenever a profile changes. See the table below.

Achievements

ACHIEVEMENT	CREDITS	HOW IT'S UNLOCKED
First Mix	+10	Upload your first mix
First Gig	+10	1 completed gig
Social Butterfly	+15	2 accepted connections
5-Star Rating	+50	Average rating of 4.8 or higher (name says 5 stars)
10 Gigs	+100	10 completed gigs
Verified Artist	+100	Profile verified by R/HOOD
Community Builder	+150	50 accepted connections
Top Performer	+200	Rating 4.9+ with 20+ completed gigs
50 Gigs	+500	50 completed gigs
Gig Master	0	Listed (5 gigs) but never checked or rewarded
R/HOOD Legend	0	Listed (1,000 credits) but never checked or rewarded

How DJs spend credits

ACTION	CREDITS	WHAT IT DOES
Boost an application	-10	Moves the DJ's application to the top of the brand's list for 24 hours. Only on your own applications, one active boost at a time, and you need at least 10 credits.

Things to fix or decide

1. Gig credits are paid at approval, not completion. Approving an application pays 50 straight away, even if the gig is cancelled or never happens. If an application is moved back to pending and approved again, it pays another 50.

2. The app tells DJs the wrong amounts. The AI help chat says DJs get 10 credits per gig and that credits can't be used for anything. In reality it's 50, and credits pay for boosts. An older, unused 10-credit gig rule also still exists in the database.

3. Referrals pay for sign-ups, not members. 25 credits arrive when someone signs up with your code, even if we never approve them. The new DJ gets no welcome reward.

4. Mix likes are the easiest credits to farm. 10 per like is as much as 20% of an approved gig. Now that sign-ups go through the waitlist it's harder to fake accounts, but it's still worth watching.

5. The history is incomplete. Only gig approvals and referrals are logged in the credit history. Mix likes, achievements and opportunity rewards change the balance with no record, so the yearly leaderboard (built from the history) undercounts them.

6. Two achievements do nothing (Gig Master, R/HOOD Legend), and "5-Star Rating" unlocks at 4.8.

Decisions for the team

A. When should gig credits be paid? At approval (today), or only when the brand marks the gig completed? And how much: 10, 25 or 50?

B. Referrals: pay the referrer when the new DJ is *approved* rather than at sign-up? Give the new DJ a welcome bonus too (for example 10)?

C. Mix likes: keep 10 per like, lower it (for example 2), or cap it per day?

D. Spending: is a 10-credit, 24-hour boost the right price? Should credits unlock anything else (featured profile, priority on new opportunities)?

E. Achievements: remove or wire up Gig Master and R/HOOD Legend, and set 5-Star Rating to 5.0 or rename it.

Once the team agrees, every change here can go live through the database without a new App Store build. The help-chat wording can then ship as an over-the-air update.
